

Short A.I. Usage

Castillo:

- Ai assistance on constructing features, checking for errors and clarifications regarding advanced programming logic
- Guided by Ai on GitHub submissions, double checking my part for commits
- Guided by Ai on GitHub errors, unfamiliar github features, and prevention of progress loss

Calingasan:

- Al guided me through setting up Git, configuring the repository, creating a .gitignore file, and pushing my initial project files to GitHub.
- Al assisted me in creating the Job Vacancy module, including the DataGridView, search functionality, and vacancy details interface.
- Al helped me implement the job application process, duplicate application prevention, and the My Applications feature.
- Al guided me in resolving Git issues and transferring my repository to the designated team branch after encountering push and synchronization errors.

Damian:

- Major Debugs for when errors occurred during assembly
- Fixes with some UI designs (that were accidentally converted to hard-coded files)
- HR Forms backend coding
- Analysis for the member's codes' difference and how it can be resolved
- Assembly of the codes
- Code reference and base of some features since there was no significance to any of the current learning. Additionally, the majority of the concepts were severely unfamiliar.

Esguerra:

- Used AI to troubleshoot coding errors and understand unfamiliar programming concepts.
- Asked Ai for guidance when implementing features and resolving issues in the code
- Used AI assistance for comparing database lists, preventing deletion of records under review, and managing Git/GitHub branch submissions.
